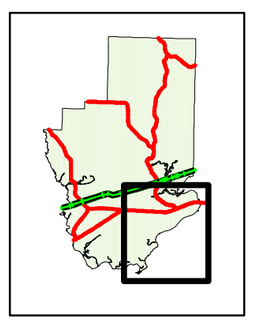
NOTES:

1. Surge limits are based on still water storm tide elevations above National Geodetic Vertical Datum (NGVD) estimated from a 1999 SLOSH model at mean high tide. No wave setup is included.

2. Source of base mapping is U.S.G.S. 1:100,000 scale maps and Tiger data.

3. Hurricane surge limits were determined by overlaying SLOSH model water surface elevations on U.S.G.S. 7.5 minute digital elevation models.



Scale:
1 Inch = 4,000 feet
