

Hurricane Maria (2017): Preliminary Peak Wind Gust (mph)

Estimated 3-second gust wind speeds (mph) at 10 m above ground over flat open terrain from ARA model fit to surface level observations using NHC storm track (smoothed at 1400 UTC on 9/20/2017) and central pressure data through Forecast/Advisory 37 at 0900 UTC on 9/25/2017. Map is subject to change. Created on: 9/25/2017.

Wind Speed Sensors during Hurricane Maria (2017)

Station names beginning with the letter "T" are ASOS stations; data buoys and C-MAN stations are all located offshore or at the coast. Other stations refer to a set of combined land and buoy stations from which observation data were obtained from WindAlert.com. Map created on: 9/25/2017
