

NOTE:

1. Surge limits are based on still water storm tide elevations above National Geodetic Vertical Datum (NGVD) estimated from a 1999 SLOSH model at mean high tide. No wave setup is included.
2. Source of base mapping is USGS 1:100,000 scale maps and Tiger data.
3. Hurricane surge limits were determined by overlaying SLOSH water surface elevations on USGS 7.5 minute digital elevation models.

Scale: 1 Inch = 4,000 feet
